(a) Volumetric Correlation & Linear Fit
ICC(2, 1) = 0.8894
Pearson $r = 0.8886$ ($p < 10^{-30}$)
Spearman $\rho = 0.8819$
Patients ($n = 110$)
Identity Line ($y = x$)
Regression: $y = 0.91x + 681.2$
Proposed 3D Model Volume (voxels)
Radiologist Ground Truth 3D Volume (voxels)

(b) Bland-Altman Volumetric Agreement
Patients ($n = 110$)
Mean Bias = +143.7 voxels
Upper 95% LoA = +4814.1
Lower 95% LoA = -4526.6
Difference: $V_{\text{Model}} - V_{\text{Radiologist}}$ (voxels)
Mean 3D Volume: $\frac{V_{\text{Radiologist}} + V_{\text{Model}}}{2}$ (voxels)
